

Residential & Commercial Overhead Door Preventive Maintenance Agreement Program

Just like your car or truck, planned maintenance can extend the life of your garage doors, hardware, operators, electrical control panels, access systems and dock equipment, as well as preventing not only costly unexpected repairs, but possible accidents and/or injury to you, your family members or personnel. If this equipment is out of operation, it can result in added security expense, or worse, your home or facility that is not secure. Preventive maintenance is not only a factor in providing safe and useable equipment; it can also maintain your business' productivity and efficiency levels. Since exterior shipping doors are the first and last part of the product cycle in most facilities, your equipment should be performing at its highest level all of the time.

The purpose of the Preventive Maintenance Agreement Program from Big Guy Garage Doors is to establish consistent routine maintenance of your garage door equipment for a longer life, more reliable product performance, and early detection of operational malfunctions. Our extensive experience has taught us that periodic preventive maintenance inspections can reduce both downtime and major repair expenses while extending the operational efficiency of your overhead doors.

By purchasing our preventive maintenance program, you become a 'preferred customer' which entitles you to:

- Discounts on parts and labor;
- First priority for service calls;

In addition to those services, our preventive maintenance will:

- Increase the operational efficiency and reliability of your overhead door and its mechanics;
- Extend the useful life of your equipment;
- Reduce the probability of equipment malfunctioning;
- Decrease downtime; and
- Lower long-term repair expenses,

If you would like to learn more about what our Preventive Maintenance Agreement Program has to offer, or talk to a representative about how Big Guy Garage Doors can help your home or business, [contact us](#) today.
